## Web Clocking Availability

Your employees now have the ability to clock in and clock out even when the Time & Attendance service is undergoing maintenance.

If an employee attempts to clock in or clock out when the Time & Attendance service is undergoing maintenance, the employee will then be required to enter their password a second time for validation purposes prior to clicking one of the clocking buttons. Once the Time & Attendance service is fully available, the employee's user ID and password will automatically be verified and the employee's punch will be posted to their timecard.

**Note:** This section applies to your employees if they are using web clocking. Also, the badge number check box and the clocking buttons will continue to be displayed regardless of your company's setup.
